		Sum 56.3	Sum 116.1	
No. of Col. . .	26	27	28	

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea ;
no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means
of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb
thermometer are converted into mean daily values by the application of corrections
deduced from a discussion of the photographic records made during the 50 years ending
1903. With the corrected mean reading of the dry bulb thermometer is combined the
corrected mean of the readings of the maximum and minimum thermometers, forming
the mean daily value of the temperature of the air (column 8). The mean daily dew
point temperature and degree of humidity are deduced from the mean daily values
of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the
Air Ministry.

The average temperature of the air is that derived from a discussion of the observa-
tions made at Greenwich during the 65 years ending 1906, and that of horizontal
movement of the air from a discussion of the anemometric records for the 50 years
ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and
- "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermo-
meter, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.
The symbols employed are:—P. positive; N. negative; w. weak; m. moderate;
s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument
show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.78 ins. at the beginning of the week
to 29.74 ins. by 6h. on 16th; increased to 30.12 ins. by 11h. on 17th; decreased to 29.86 ins.
by 18h. on 18th; increased to 30.26 ins. by 9h. on 21st; decreased and was 29.87 ins. by
midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 29TH JUNE, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-sixth week of the year numbered 6,679 corresponding to an annual rate of 17·7 per 1,000 living: stillbirths numbered 294 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,567 (187 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				June 8.	June 15.	June 22.	June 29.
107 Great Towns	10·5	10·2	10·0	9·5
London	10·0	9·6	9·4	8·9
Birmingham	9·4	9·5	10·5	8·6
Liverpool	12·3	12·1	11·6	10·2
Manchester	12·6	11·7	10·5	10·9
Sheffield	10·2	10·3	8·1	8·5
Leeds	14·0	12·0	10·3	11·7
Bristol	9·2	8·4	9·5	8·3
West Ham	8·3	8·7	7·3	10·0

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 50 against 61, 54 and 54 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,495 live births corresponding to an annual rate of 17·4 per 1,000 living: stillbirths numbered 54 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 762 (38 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 38 against 51, 45 and 49 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

The returns received for the month of May last include four deaths belonging to areas outside Greater London, the County Boroughs and Great Towns, in which small-pox was mentioned as a cause of death. These deaths have been provisionally classed to small-pox and assigned as follows:—two to Gravesend M.B. (Kent) and one each to Bentley with Arksey U.D. (Yorks W.R.) and Leigh M.B. (Lancs).

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census. The yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and last are corrected by the exclusion of deaths of persons admitted into public institutions from without respective areas.

§ As extended 1st April, 1929.

The results apply to the Civil Day or from midnight to midnight.
 The height of the eastern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
 Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
 The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1918.
 In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
 The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
 The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
 The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.
 The reading of the barometer decreased generally from 29.87 ins. at the beginning of the week to 29.72 ins. by 17h. on 24th; increased generally to 30.06 ins. by 7h. on 28th; decreased and was 29.77 ins. by midnight on the 29th.

The Registrar-General's DECENNIAL SUPPLEMENT

1921.

PART TWO.

Occupational Mortality, Fertility and Infantile Mortality.

A volume dealing with occupational mortality in England and Wales based upon the deaths in the three years around each Census is issued decennially.

The present volume contains 116 pages of abstracts showing the deaths and death-rates at several age groups from certain causes in upwards of 170 occupations, and 102 pages of letterpress with 5 diagrams in which the variations of the mortality, fertility and infantile mortality in the several occupations and social classes are fully discussed.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 6TH JULY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-seventh week of the year numbered 6,624 corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 276 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,760 (193 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				June 15.	June 22.	June 29.	July 6.
107 Great Towns	10·2	10·0	9·5	10·0
London	9·6	9·4	8·9	9·5
Birmingham	9·5	10·5	8·6	10·4
Liverpool	12·1	11·6	10·2	11·7
Manchester	11·7	10·5	10·9	11·2
Sheffield	10·3	8·1	8·5	10·0
Leeds	12·0	10·3	11·7	11·3
Bristol	8·4	9·5	8·3	6·5
West Ham	8·7	7·3	10·0	8·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 53 against 54, 54 and 50 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,457 live births corresponding to an annual rate of 17·0 per 1,000 living: stillbirths numbered 49 corresponding to a rate of 33 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 810 (48 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 40 against 45, 49 and 38 in the three weeks preceding.

During the week small-pox was mentioned as a cause of death in one case which has been provisionally classified to small-pox and assigned to Stepney (Met. Borough).

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figures, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and elsewhere are corrected by the exclusion of deaths of persons admitted into public institutions from without respective areas.

Includes one death from small-pox.

As extended 1st April, 1929.

No. of Col. ..		Sum 31.5	Sum 115.2		
		27	28		

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 30 years ending 1903. With the corrected mean reading of the dry bulb thermometer is compared the corrected mean of the readings of the maximum and minimum thermometer, forming the mean daily value of the temperature of the air (column 6). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: +, F. positive; N. negative; W. weak; M. moderate; S. strong; V. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 29.77 ins. at the beginning of the week to 29.63 ins. by 18h. on June 30th; increased to 29.75 ins. by 22h. on July 1st; decreased to 29.48 ins. by 6h. on July 4th; increased to 29.74 ins. by 7h. on July 5th; decreased to 29.66 ins. by 7h. on July 6th; increased and was 29.63 ins. by midnight on July 6th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 13TH JULY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-eighth week of the year numbered 6,719 corresponding to an annual rate of 17·8 per 1,000 living: stillbirths numbered 281 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,764 (4 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				June 22.	June 29.	July 6.	July 13.
107 Great Towns	10·0	9·5	10·0	10·0
London	9·4	8·9	9·5	9·3
Birmingham	10·5	8·6	10·4	10·0
Liverpool	11·6	10·2	11·7	9·6
Manchester	10·5	10·9	11·2	12·5
Sheffield	8·1	8·5	10·0	8·9
Leeds	10·3	11·7	11·3	12·8
Bristol	9·5	8·3	6·5	9·3
West Ham	7·3	10·0	8·5	9·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 51 against 54, 50 and 53 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,479 live births corresponding to an annual rate of 17·3 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 30 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 797 (13 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 45, against 49, 38 and 40 in the three weeks preceding.

During the week small-pox was mentioned as a cause of death in two cases which have been provisionally classified to small-pox one being assigned to Stepney (Met. Borough) and the other to Willesden U.D.

population adjusted by the exclusion of non-civilians.
 The populations are estimated to the middle of 1923, except that of Belfast which is the 1926 Census
 yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally
 adjusted by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths
 reported from elsewhere in Scotland during the week; those in Dublin Registration Area and
 are corrected by the exclusion of deaths of persons admitted into public institutions from without
 the respective areas.
 Includes one death from small-pox.
 Extended 1st April, 1929.
 Includes two deaths from small-pox.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer increased generally from 29.83 ins. at the beginning of the week to 30.24 ins. by midnight on the 13th.

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poliomyelitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 20TH JULY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-ninth week of the year numbered 6,602 corresponding to an annual rate of 17·4 per 1,000 living: stillbirths numbered 291 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,727 (37 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	June 29.	July 6.	July 13.	July 20.
107 Great Towns	9·5	10·0	10·0	9·9
London	8·9	9·5	9·3	9·4
Birmingham	8·6	10·4	10·0	10·4
Liverpool	10·2	11·7	9·6	11·5
Manchester	10·9	11·2	12·5	11·0
Sheffield	8·5	10·0	8·9	8·5
Leeds	11·7	11·3	12·8	12·7
Bristol	8·3	6·5	9·3	9·8
West Ham	10·0	8·5	9·5	8·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 55 against 50, 53 and 51 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,455 live births corresponding to an annual rate of 17·0 per 1,000 living: stillbirths numbered 50 corresponding to a rate of 33 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 805 (8 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 44, against 38, 40 and 45 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

There was no death from small-pox in the returns received from areas outside Greater London, the County Boroughs and Great Towns for the month of June last.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1928 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

DATE.	JULY	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY	14		14.2	16.2	Cloudless generally. Haze 6 ^h . till 21 ^h .	<p>The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1895, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1816.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.</p> <p>The reading of the barometer increased from 30.24 ins. at the beginning of the week to 30.25 ins. by 7h. on 14th; decreased to 29.79 ins. by 1h. on 17h.; increased to 30.01 ins. by 7h. on 18th.; decreased to 29.50 ins. by 19h. on 20th; increased to 29.58 ins. by 20h. on 20th; decreased and was 29.84 ins. by midnight on the same day.</p>
MONDAY	15		14.6	16.1	Cloudless generally. Haze 6 ^h . till 12 ^h . Dew at night.	
TUESDAY	16		13.7	16.1	Cloudless till 12 ^h .; then partially cloudy. Haze from 5h. Shower 23 ^h . Dew in morning.	
WEDNESDAY	17		14.1	16.1	Nearly cloudless generally. Haze till 12h.	
THURSDAY	18	No register.	13.5	16.0	Cloudless till 2h.; variably cloudy till 6 ^h .; partially cloudy till 18h.; then cloudless. Haze 6 ^h . till 9h. Dew at night.	
FRIDAY	19		14.3	16.0	Nearly cloudless generally. Haze from 6h. Dew in morning and at night.	<p>Sum 92.7</p> <p>Sum 112.4</p>
SATURDAY	20		8.3	15.9	Partially cloudy till 10h.; cloudy till 17h.; then overcast. Haze 5h. till 15h. Heavy rain 18 ^h . till 19 ^h .; and 23 ^h . till 23h. Thunder and lightning 18 ^h . till 19h.; then lightning till 21h.

THE

REGISTRAR-GENERAL'S

WEEKLY RETURN OF BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

SATURDAY, 27TH JULY,
1929

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1929.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 27TH JULY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirtieth week of the year numbered 6,713 corresponding to an annual rate of 17·7 per 1,000 living: stillbirths numbered 244 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,570 (158 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—			July 6.	July 13.	July 20.	July 27.
107 Great Towns	10·0	10·0	9·9	9·5
London	9·5	9·3	9·4	9·3
Birmingham	10·4	10·0	10·4	8·7
Liverpool	11·7	9·6	11·5	10·4
Manchester	11·2	12·5	11·0	10·9
Sheffield	10·0	8·9	8·5	9·4
Leeds	11·3	12·8	12·7	10·3
Bristol	6·5	9·3	9·8	11·0
West Ham	8·5	9·5	8·7	8·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 48 against 53, 51 and 55 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,475 live births corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 34 corresponding to a rate of 23 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 795 (10 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 32, against 40, 45 and 44 in the three weeks preceding.

During the week small-pox was mentioned as a cause of death in one case which has been provisionally classified to small-pox and assigned to Bethnal Green (Metropolitan Borough).

Table 1.—107 COUNTY BOROUGHs and
GREAT TOWNS, GREATER LONDON, } BIRTHS and DEATHS registered in the
and FOUR SCOTTISH and IRISH TOWNS. } week ended 27th July, 1929.

BELFAST† ..	415,151	187	?	91	8	1	-	1	2	1	-	-

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

† Includes 1 death from small-pox.

§ As extended 1st April, 1929.

No. of Col. . .	26	Sum 50.5	Sum 110.3		28

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 30 years ending 1905. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily values of the point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -I, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.84 ins. at the beginning of the week to 29.81 ins. by 17h. on 21st; increased to 29.94 ins. by 9h. on 23rd; decreased to 29.74 ins. by 13h. on 24th; increased to 30.08 ins. by 13h. on 27th; decreased and was 30.05 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 3RD AUGUST, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-first week of the year numbered 6,728 corresponding to an annual rate of 17·8 per 1,000 living: stillbirths numbered 251 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,366 (204 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				July 13.	July 20.	July 27.	Aug. 3.
107 Great Towns	10·0	9·9	9·5	8·9
London	9·3	9·4	9·3	8·6
Birmingham	10·0	10·4	8·7	8·5
Liverpool	9·6	11·5	10·4	9·1
Manchester	12·5	11·0	10·9	8·1
Sheffield	8·9	8·5	9·4	8·5
Leeds	12·8	12·7	10·3	10·3
Bristol	9·3	9·8	11·0	8·1
West Ham	9·5	8·7	8·2	8·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 52 against 51, 55 and 48 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,463 live births corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 42 corresponding to a rate of 28 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 733 (62 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 36, against 45, 44 and 32 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without respective areas.

‡ Return not received.

§ As extended 1st April, 1929.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY --	28	0.8	15.6	Overcast generally. Rain 13 ^h . till 18 ^h .; and from 21 ^h . Damping 18 ^h . till 18 ^h .; at 20 ^h .; and from 21 ^h . till 21 ^h . Faint Solar halo 8 ^h .	<p>The results apply to the Civil Day or from midnight to midnight.</p> <p>The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometers, forming the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1918.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -F, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.</p> <p>The reading of the barometer decreased from 30.05 ins. at the beginning of the week to 29.48 ins. by 6h. on 24th July; increased to 29.73 ins. by 8h. on July 30th; decreased to 29.09 ins. by 3h. on August 1st; increased to 29.69 ins. by 23h. on August 2nd; decreased and was 29.61 ins. by midnight on August 3rd.</p>

THE
REGISTRAR-GENERAL

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGH
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED
INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 10TH AUGUST,
1929**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1929.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 10TH AUGUST, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-second week of the year numbered 5,944 corresponding to an annual rate of 15·7 per 1,000 living: stillbirths numbered 305 corresponding to a rate of 49 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,324 (42 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	July 20.	July 27.	Aug. 3.	Aug. 10.
107 Great Towns	9·9	9·5	8·9	8·8
London	9·4	9·3	8·6	8·2
Birmingham	10·4	8·7	8·5	9·2
Liverpool	11·5	10·4	9·1	9·6
Manchester	11·0	10·9	8·1	9·1
Sheffield	8·5	9·4	8·5	9·1
Leeds	12·7	10·3	10·3	10·6
Bristol	9·8	11·0	8·1	7·2
West Ham	8·7	8·2	8·3	7·0

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 48 against 55, 48 and 52 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,369 live births corresponding to an annual rate of 16·0 per 1,000 living: stillbirths numbered 59 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 697 (36 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 40, against 44, 32 and 36 in the three weeks preceding.

BELFAST† ..	415,151	229	?	79	12	-	-	1	1	-	3	-

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1923, except that of Belfast which is the 1923 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Return not received.

§ As extended 1st April, 1923.

		27	28		

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; W. weak; M. moderate; S. strong; V. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.61 ins. at the beginning of the week to 29.44 ins. by 15h. on 4th; increased to 29.79 ins. by 20h. on 5th; decreased to 29.51 ins. by 19h. on 6th; increased generally to 29.96 ins. by 22h. on 10th; decreased and was 29.74 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 17TH AUGUST, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-third week of the year numbered 6,834 corresponding to an annual rate of 18·1 per 1,000 living: stillbirths numbered 252 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,388 (64 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	July 27.	Aug. 3.	Aug. 10.	Aug. 17.
107 Great Towns	9·5	8·9	8·8	9·0
London	9·3	8·6	8·2	9·0
Birmingham	8·7	8·5	9·2	8·8
Liverpool	10·4	9·1	9·6	9·7
Manchester	10·9	8·1	9·1	11·5
Sheffield	9·4	8·5	9·1	8·7
Leeds	10·3	10·3	10·6	10·9
Bristol	11·0	8·1	7·2	7·6
West Ham	8·2	8·3	7·0	8·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 51 against 48, 52 and 48 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,492 live births corresponding to an annual rate of 17·4 per 1,000 living: stillbirths numbered 47 corresponding to a rate of 31 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 769 (72 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 49, against 32, 36 and 40 in the three weeks preceding.

BELFAST† ..	415,151	132	?	76	13	-	-	1	5	-	7	-

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

§ As extended 1st April, 1929.

No. of Obs. ..		27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of correction—deduced from a discussion of the photographic records made during the 50 years ending 1893. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1893, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1893.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.84 ins. at the beginning of the week to 29.85 ins. by 17h. on 11th; increased generally to 30.07 ins. by 6h. on 15th; decreased generally to 29.62 ins. by 2h. on 17th; increased and was 29.75 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 24TH AUGUST, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-fourth week of the year numbered 6,658 corresponding to an annual rate of 17·6 per 1,000 living: stillbirths numbered 259 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,356 (32 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—			Aug. 3.	Aug. 10.	Aug. 17.	Aug. 24.
107 Great Towns	8·9	8·8	9·0	8·9
London	8·6	8·2	9·0	8·4
Birmingham	8·5	9·2	8·8	9·0
Liverpool	9·1	9·6	9·7	9·7
Manchester	8·1	9·1	11·5	9·0
Sheffield	8·5	9·1	8·7	8·5
Leeds	10·3	10·6	10·9	10·5
Bristol	8·1	7·2	7·6	8·5
West Ham	8·3	7·0	8·2	7·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 52 against 52, 48 and 51 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,510 live births corresponding to an annual rate of 17·6 per 1,000 living: stillbirths numbered 55 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 716 (53 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 44, against 36, 40 and 49 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

There was no death from small-pox in the returns received from areas outside Greater London, the County Boroughs and Great Towns for the month of July last.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figures, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally adjusted by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

As extended 1st April, 1929.

Table 2.—LONDON and certain CITIES in the } BIRTHS and DEATHS for last available year

SUNDAY .. 18	wP till 17 $\frac{1}{2}$ h.; mP till 15 $\frac{1}{2}$ h.; variably sP and sN till 16 $\frac{1}{2}$ h.; then mP.	3.9	14.4	Cloudy till 6h.; overcast till 20 $\frac{1}{2}$ h.; then variably cloudy. Shower 12 $\frac{1}{2}$ h. Rain 15 $\frac{1}{2}$ h. till 15 $\frac{1}{2}$ h.; and 1 $\frac{1}{2}$ h. till 16 $\frac{1}{2}$ h.; then occa- sional damping till 19h.
MONDAY .. 19	mP till 8h.; sP till 12 $\frac{1}{2}$ h.; then mP.	0.2	14.3	Overcast generally. Solar halo 15 $\frac{1}{2}$ h.
TUESDAY .. 20	mP	7.6	14.3	Overcast till 6h.; nearly cloudless till 12 $\frac{1}{2}$ h.; very cloudy till 19h.; overcast till 23 $\frac{1}{2}$ h.; then partially cloudy.
WEDNESDAY 21	mP till 17 $\frac{1}{2}$ h.; wP till 20 $\frac{1}{2}$ h.; then mP.	2.3	14.2	Partially cloudy till 3h.; very cloudy till 6 $\frac{1}{2}$ h.; overcast till 11 $\frac{1}{2}$ h.; very cloudy till 12 $\frac{1}{2}$ h.; then overcast. Damping 6 $\frac{1}{2}$ h. till 7 $\frac{1}{2}$ h.
THURSDAY 22	wP till 8h.; mP till 15 $\frac{1}{2}$ h.; loss of regis- ter till 21h.; then mP.	1.8	14.2	Nearly overcast generally. Damping at 7 $\frac{1}{2}$ h.; 8h. and 10h. Rain 21 $\frac{1}{2}$ h. till 23 $\frac{1}{2}$ h. Lightning 22 $\frac{1}{2}$ h.
FRIDAY .. 23	wP till 11h.; then mP.	9.0	14.1	Nearly overcast till 11h.; partially cloudy till 14 $\frac{1}{2}$ h.; overcast till 16h.; then clearing to nearly cloudless by 21h. Damping 1h. and 4h. Brisk wind 11h. till 15h. Dew at night.
SATURDAY 24	mP till 4h.; wP till 7 $\frac{1}{2}$ h.; then mP.	5.6	14.0	Cloudless till 4h.; very cloudy till 9h.; nearly overcast till 12h.; very cloudy till 15h.; then overcast generally. Dew in morning. Damping 19h. till 19 $\frac{1}{2}$ h.; and 20h. till 20 $\frac{1}{2}$ h.
		Sum 30.4	Sum 99.5	
		27	28	

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8).
The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.
The reading of the barometer increased from 29.75 ins. at the beginning of the week to 30.11 ins. by 10h. on 19th; decreased generally to 29.87 ins. by 16h. on 24th; increased and was 29.95 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 31st AUGUST, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-fifth week of the year numbered 6,422 corresponding to an annual rate of 17·0 per 1,000 living : stillbirths numbered 267 corresponding to a rate of 40 per 1,000 total births (including stillborn) : the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,289 (67 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Aug. 10.	Aug. 17.	Aug. 24.	Aug. 31.
107 Great Towns	8·8	9·0	8·9	8·7
London	8·2	9·0	8·4	8·7
Birmingham	9·2	8·8	9·0	7·8
Liverpool	9·6	9·7	9·7	9·3
Manchester	9·1	11·5	9·0	9·6
Sheffield	9·1	8·7	8·5	6·9
Leeds	10·6	10·9	10·5	9·8
Bristol	7·2	7·6	8·5	9·1
West Ham	7·0	8·2	7·5	8·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 53 against 48, 51 and 52 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,369 live births corresponding to an annual rate of 16·0 per 1,000 living : stillbirths numbered 46 corresponding to a rate of 33 per 1,000 total births (including stillborn) : the civilian deaths (excluding stillbirths) numbered 743 (27 more than the number in the preceding week) : infant mortality based on the average weekly number of live births during the last 52 weeks was 44, against 40, 49 and 44 in the three weeks preceding.

GLASGOW† ..	1,061,900	391	?	221	22	1	-	-	-	2	3	4
DUBLIN (REGISTRATION AREA)† ..	423,800	213	?	107	16	-	-	-	3	1	4	-
BELFAST† ..	415,151	178	?	90	13	-	-	-	1	1	6	-

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1923, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

DATE.	AUGUST.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY	25	mP till 11h.; wP till 19h.; then mP.	10.8	14.0	Overcast till 2h.; cloudy till 12h.; then partially cloudy. Slight haze 9h. till 15h. Dew in morning and at night.	<p>The results apply to the Civil Day or from midnight to midnight.</p> <p>The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1863. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the A. Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1896.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and "lower" than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; W. weak; M. moderate; S. strong; V. variable.</p> <p>The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.</p> <p>The readings of the aneroid increased from 29.95 ins. at the beginning of the week to 30.05 ins. by 10h. on Aug. 28th; decreased to 29.63 ins. by 11h. on Aug. 29th; increased to 29.93 ins. by 21h. on Aug. 29th; decreased to 29.59 ins. by 14h. on Aug. 31st; increased and was 29.63 ins. by midnight of the same day.</p>
MONDAY	26	wP till 7½h.; mP till 11h.; then wP.	12.6	13.9	Nearly cloudless. Dew and mist in morning. Dew at night.	
TUESDAY	27	wP till 7h.; mP till 11h.; wP till 1½h.; then mP.	10.5	13.9	Nearly cloudless till 13h.; nearly overcast till 20½h.; then partially cloudy. Fog about 5h.; then haze till 15h. Dew at night.	
WEDNESDAY	28	mP	7.6	13.8	Cloudy till 13h.; nearly overcast till 19½h. then becoming nearly cloudless by 20½h. Lightning and thunder 2h. till 2½h. Brisk wind 11h. till 15h. Solar halo 13h. till 17½h. Dew in morning and at night.	
THURSDAY	29	wP till 6½h.; mP till 11h.; wP till 1½h.; then mP.	11.0	13.7	Partially cloudy till 12h.; very cloudy till 18h.; then partially cloudy. Mist and dew in morning. Dew at night.	
FRIDAY	30	mP till 12½h.; wP till 1½h.; then mP.	6.1	13.7	Cloudy till 9h.; nearly overcast till 15h.; variably cloudy till 19½h.; then cloudless. Mist 5h. till 6h. Solar halo 13½h. Dew in morning and at night.	
SATURDAY	31	wP till 12h.; then mP.	9.4	13.6	Little cloud till 13½h. cloudy generally till 23h. nearly cloudless by 0h. Dew in morning. Slight shower 16½h. Distant lightning from dusk.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 7TH SEPTEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-sixth week of the year numbered 6,266 corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 240 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,508 (219 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Aug. 17.	Aug. 24.	Aug. 31.	Sept. 7.
107 Great Towns	9·0	8·9	8·7	9·3
London	9·0	8·4	8·7	9·3
Birmingham	8·8	9·0	7·8	8·1
Liverpool	9·7	9·7	9·3	10·0
Manchester	11·5	9·0	9·6	9·8
Sheffield	8·7	8·5	6·9	7·8
Leeds	10·9	10·5	9·8	10·1
Bristol	7·6	8·5	9·1	8·7
West Ham	8·2	7·5	8·3	7·1

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 53 against 51, 52 and 53 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,334 live births corresponding to an annual rate of 15·6 per 1,000 living: stillbirths numbered 48 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 799 (56 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 37, against 49, 44 and 44 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1923, except that of Belfast which is the 1923 Census. The yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and fast are corrected by the exclusion of deaths of persons admitted into public institutions from without respective areas.

§ As extended 1st April, 1923.

SATURDAY	7 WP till 9h.; mP till 23h.; then WP.	9.7	13.1	Cloudless till 2h.; nearly overcast by 4h. Clearing 6h. to cloudless by 7½h. Dew in morning and at night. Mist in morning.
No. of Col.	26	Sum 55.3	Sum 93.4	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.68 ins. at the beginning of the week to 29.99 ins. by 10h. on 2d.; decreased to 29.72 ins. by 16h. on 4d.; increased to 30.24 ins. by 9h. on 7d.; decreased and was 30.15 ins. by midnight of the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 14TH SEPTEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-seventh week of the year numbered 6,105 corresponding to an annual rate of 16·1 per 1,000 living: stillbirths numbered 265 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,492 (18 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	Aug. 24.	Aug. 31.	Sept. 7.	Sept. 14.
107 Great Towns	8·9	8·7	9·3	9·3
London	8·4	8·7	9·3	8·8
Birmingham	9·0	7·8	8·2	7·9
Liverpool	9·7	9·3	10·0	11·1
Manchester	9·0	9·6	9·8	9·5
Sheffield	8·5	6·9	7·8	9·8
Leeds	10·5	9·8	10·1	10·0
Bristol	8·5	9·1	8·7	8·4
West Ham	7·5	8·3	7·1	9·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 54 against 52, 53 and 53 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,360 live births corresponding to an annual rate of 15·9 per 1,000 living: stillbirths numbered 40 corresponding to a rate of 29 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 752 (47 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 47, against 44, 44 and 37 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

		Sum 65.3	Sum 90.3		
No. of Oct. ..		97	28		

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1893. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1893, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1896.

The numbers in columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - F. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.16 ins. at the beginning of the week to 29.80 ins. by 10h. on 9th; increased generally to 30.05 ins. by 10h. on 11th; decreased to 29.78 ins. by 13h. on 12th; increased generally and was 29.90 ins. by midnight on the 13th.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 21st SEPTEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-eighth week of the year numbered 6,074 corresponding to an annual rate of 16·1 per 1,000 living: stillbirths numbered 238 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,438 (54 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—			Aug. 31.	Sept. 7.	Sept. 14.	Sept. 21.
107 Great Towns	8·7	9·3	9·3	9·1
London	8·7	9·3	8·8	8·6
Birmingham	7·8	8·2	7·9	8·0
Liverpool	9·3	10·0	11·1	10·2
Manchester	9·6	9·8	9·5	10·6
Sheffield	6·9	7·8	9·8	7·8
Leeds	9·8	10·1	10·0	9·8
Bristol	9·1	8·7	8·4	11·6
West Ham	8·3	7·1	9·3	6·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 61 against 53, 53 and 54 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,375 live births corresponding to an annual rate of 16·0 per 1,000 living: stillbirths numbered 49 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 732 (20 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 47, against 44, 37 and 47 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

There was no death from small-pox in the returns received from areas outside Greater London, the County Boroughs and Great Towns for the month of August last.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1928 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

SATURDAY 21	mP till 5h.; wP till 14h.; then mP.	3.0	12.3	Cloudless till 2h.; variably cloudy till 5h.; overcast till 14h.; partially cloudy till 21h.; then cloudless.	
		Sum 21.4	Sum 87.1		
No. of Col. . . :	26	27	28		

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1803. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer increased generally from 29.90 ins. at the beginning of the week to 30.06 ins. by 10h. on 16th; decreased to 29.66 ins. by 18h. on 16th; increased to 29.77 ins. by 10h. on 19th; decreased to 29.47 ins. by 11h. on 20th; increased to 29.84 ins. by 3h. on 21st; decreased to 29.66 ins. by 14h. on 21st; increased and was 29.90 ins. by midnight on the same day.

1929. No. 39.

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 28TH SEPTEMBER,
1929**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1929.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 28TH SEPTEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-ninth week of the year numbered 6,506 corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 236 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,499 (61 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

				Sept. 7.	Sept. 14.	Sept. 21.	Sept. 28.
107 Great Towns	9·3	9·3	9·1	9·3
London	9·3	8·8	8·6	8·7
Birmingham	8·2	7·9	8·0	10·7
Liverpool	10·0	11·1	10·2	12·4
Manchester	9·8	9·5	10·6	11·0
Sheffield	7·8	9·8	7·8	9·3
Leeds	10·1	10·0	9·8	8·8
Bristol	8·7	8·4	11·6	8·5
West Ham	7·1	9·3	6·3	9·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 71 against 53, 54 and 61 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 79, 103 and 144 in the three preceding weeks increased to 186 and included 36 in London, 31 in Birmingham, 18 in Liverpool, 12 in Sunderland and 11 in Hull.

In London (Administrative County including the City of London) there were 1,440 live births corresponding to an annual rate of 16·8 per 1,000 living: stillbirths numbered 43 corresponding to a rate of 29 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 747 (15 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 57, against 37, 47 and 47 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1928 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

§ As extended 1st April, 1929.

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are -F, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.
The reading of the barometer increased generally from 29.90 ins. at the beginning of the week to 30.32 ins. by 10h. on 25th; decreased generally and was 29.89 ins. by midnight on the 26th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 5TH OCTOBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fortieth week of the year numbered 6,036 corresponding to an annual rate of 16'0 per 1,000 living: stillbirths numbered 269 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,783 (284 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Sept. 14.	Sept. 21.	Sept. 28.	Oct. 5.
107 Great Towns	9.3	9.1	9.3	10.0
London	8.8	8.6	8.7	9.6
Birmingham	7.9	8.0	10.7	9.9
Liverpool	11.1	10.2	12.4	11.2
Manchester	9.5	10.6	11.0	11.7
Sheffield	9.8	7.8	9.3	10.5
Leeds	10.0	9.8	8.8	10.7
Bristol	8.4	11.6	8.5	10.2
West Ham	9.3	6.3	9.2	11.4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 74 against 54, 61 and 71 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 103, 144 and 186 in the three preceding weeks increased to 189 and included 41 in London, 17 in Birmingham, 15 in Hull, 11 in Liverpool and 9 in Middlesbrough.

In London (Administrative County including the City of London) there were 1,388 live births corresponding to an annual rate of 16'2 per 1,000 living: stillbirths numbered 53 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 825 (78 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 59, against 47, 47 and 57 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

§ As extended 1st April, 1929.

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1865, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; V. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased generally from 29.89 ins. at the beginning of the week to 29.67 ins. by 23h. on September 30th; increased to 29.85 ins. by 11h. on October 1st; decreased to 29.38 ins. by 4h. on October 2nd; increased to 29.49 ins. by 13h. on October 2nd; decreased to 29.46 ins. by 6h. on October 3rd; increased to 29.63 ins. by 9h. on October 4th; decreased and was 29.21 ins. by midnight on October 5th.

The London Medical Exhibition,
194-200, Bishopsgate, London, E.C.2.

STATISTICAL REVIEW.

**The Registrar-General's Statistical Review of
England and Wales for the Year 1928.**

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1928 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro Spinal Fever; E, Acute Poliomyelitis; F, Acute Poliomyelitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 12TH OCTOBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-first week of the year numbered 6,311 corresponding to an annual rate of 16·7 per 1,000 living: stillbirths numbered 274 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,898 (115 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Sept. 21.	Sept. 28.	Oct. 5.	Oct. 12.
107 Great Towns	9·1	9·3	10·0	10·3
London	8·6	8·7	9·6	9·7
Birmingham	8·0	10·7	9·9	9·7
Liverpool	10·2	12·4	11·2	13·0
Manchester	10·6	11·0	11·7	11·9
Sheffield	7·8	9·3	10·5	11·0
Leeds	9·8	8·8	10·7	12·9
Bristol	11·6	8·5	10·2	10·3
West Ham	6·3	9·2	11·4	10·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 75 against 61, 71 and 74 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 144, 186 and 189 in the three preceding weeks were 186 and included 49 in London, 14 in Birmingham, 13 in Hull, 14 in Liverpool and 8 in Sunderland.

In London (Administrative County including the City of London) there were 1,387 live births corresponding to an annual rate of 16·2 per 1,000 living: stillbirths numbered 54 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 832 (7 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 63, against 47, 57 and 59 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.
† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

† As extended 1st October, 1929.

MONDAY ..	7	wP till 5h.; mP till 16h.; sN till 16½h.; mP till 23h.; then wP.	7·4	11·2	Cloudless generally till 9h.; very cloudy till 15h.; then overcast. Brisk wind till 1h. Shower about 15h.
TUESDAY ..	8	wP till 2h.; vari- ably wP and wN till 12½h.; variably sP and sN till 18h.; then mP.	2·0	11·1	Overcast generally with variably cloudy interval 7½h. till 9½h. Rain 1½h. till 7h.; 12½h. till 13½h.; and occasionally between 16½h. and 19½h. Distant thunder about 12h. Brisk wind from 19h.
WEDNESDAY	9	mP.	5·1	11·1	Overcast till 2h.; nearly cloudless till 5h.; partially cloudy till 9h.; nearly over- cast till 12h.; then very cloudy generally, Brisk wind till 3h. Mist about 7h. Slight shower 13½h.
THURSDAY	10	mP till 21h.; then wP.	1·2	11·0	Nearly overcast generally till 15h.; then overcast. Damping 6h. till 7h. Brisk wind 10h. till 16h. Rain 2½h. till 23h.
FRIDAY ..	11	wP till 13h.; then mP.	1·4	10·9	Overcast till 15h.; then variably cloudy. Rain 3h. Damping about 5h.; and from 8½h. till 10½h. Mist 18½h till 21h. Heavy dew at night.
SATURDAY	12	mP	3·5	10·9	Variably cloudy till 9h.; overcast till 14½h.; then variably cloudy. Damping 13½h.; and 14½h. Mist and dew in morn- ing and at night.
			Sum 24·5	Sum 77·5	
			27	28	
			26		No. of Column ..

The results apply to the Civil Day or from midnight to midnight. The height of the disterm of the barometer is 152 feet above the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 8h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29·21 ins. at the beginning of the week to 28·96 ins. by 13h. on 6th; increased to 29·81 ins. by 11h. on 7th; decreased to 29·23 ins. by 15h. on 8th; increased to 29·15 ins. by 10h. on 10th; decreased to 30·00 ins. by 3h. on 11th; increased to 30·20 ins. by 11h. on 12th; decreased and was 30·19 ins. by midnight on the same day.

Surgical Instruments & Appliances 45, OXFORD STREET
Hospital and Invalid Furniture 2, RATHBONE PLACE

LONDON, W.1.

THE LONDON MEDICAL EXHIBITION

(Established 1905)

will be held in the

NEW HALL OF THE ROYAL HORTICULTURAL SOCIETY,
Greycoat Street, Westminster, S.W.

October 14th-18th, 1929, from 12 noon to 6.30 p.m. daily.

The Exhibits are strictly confined to those of a nature appealing peculiarly to
the Medical Profession and comprise Surgical Instruments, Pharmaceutical
Preparations, Fine Chemicals, Medical and Orthopaedic Appliances, Medical
Publications, Dietetics, Antiseptics, Dressings—in short, complete supplies
for the Physician and Surgeon in his Professional work.

Open to Members of the Medical Profession only.

Tickets can be obtained on application to:—

THE SECRETARY,

The London Medical Exhibition,
194-200, Bishopsgate, London, E.C.2.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 19TH OCTOBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-second week of the year numbered 6,402 corresponding to an annual rate of 16·9 per 1,000 living: stillbirths numbered 257 corresponding to a rate of 3·9 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,949 (51 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Sept. 28.	Oct. 5.	Oct. 12.	Oct. 19.
107 Great Towns	9·3	10·0	10·3	10·5
London	8·7	9·6	9·7	9·8
Birmingham	10·7	9·9	9·7	9·7
Liverpool	12·4	11·2	13·0	13·3
Manchester	11·0	11·7	11·9	11·8
Sheffield	9·3	10·5	11·0	9·5
Leeds	8·8	10·7	12·9	11·2
Bristol	8·5	10·2	10·3	8·9
West Ham	9·2	11·4	10·2	11·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 67 against 71, 74 and 75 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 186, 189 and 186 in the three preceding weeks were 136 and included 35 in London, 9 in Birmingham, and 11 in Liverpool.

In London (Administrative County including the City of London) there were 1,431 live births corresponding to an annual rate of 16·7 per 1,000 living: stillbirths numbered 48 corresponding to a rate of 3·2 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 838 (6 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 65, against 57, 59 and 63 in the three weeks preceding.

Table 1.—107 COUNTY BOROUGHs and
GREAT TOWNS, GREATER LONDON,
and FOUR SCOTTISH and IRISH TOWNS.{ BIRTHS and DEATHS registered in the
week ended 19th October, 1929.

BELFAST† ..	415,151	144	?	89	15	-	-	-	-	-	3	2

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

† As extended 1st October, 1929.

			Sum 23·6	Sum 74·3	
No. of Column ..			27	28	

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day. The reading of the barometer increased generally from 30·19 ins. at the beginning of the week to 30·25 ins. by 9h. on 15th; decreased to 29·79 ins. by 14h. on 16th; increased to 29·89 ins. by 7h. on 17th; decreased generally and was 29·56 ins. by midnight on the 19th.

The results apply to the Civil Day or from midnight to midnight.
 The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
 Observations are usually taken at 9h., A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1905. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
 The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.
 In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.
 The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
 The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
 The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine each day.
 The reading of the barometer increased generally from 30·19 ins. at the beginning of the week to 30·25 ins. by 6h. on 15th; decreased to 29·79 ins. by 14h. on 16th; increased to 29·89 ins. by 7h. on 17th; decreased generally and was 29·66 ins. by midnight on the 19th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 26TH OCTOBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-third week of the year numbered 6,209 corresponding to an annual rate of 16·4 per 1,000 living: stillbirths numbered 264 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,995 (46 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	Oct. 5.	Oct. 12.	Oct. 19.	Oct. 26.
107 Great Towns	10·0	10·3	10·5	10·6
London	9·6	9·7	9·8	10·7
Birmingham	9·9	9·7	9·7	10·1
Liverpool	11·2	13·0	13·3	13·6
Manchester	11·7	11·9	11·8	12·1
Sheffield	10·5	11·0	9·5	8·1
Leeds	10·7	12·9	11·2	12·3
Bristol	10·2	10·3	8·9	8·9
West Ham	11·4	10·2	11·4	8·8

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 70 against 74, 75 and 67 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 189, 186 and 136 in the three preceding weeks were 102 and included 19 in London, 8 in Birmingham, and 22 in Liverpool.

In London (Administrative County including the City of London) there were 1,347 live births corresponding to an annual rate of 15·7 per 1,000 living: stillbirths numbered 45 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 913 (75 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 62, against 59, 63 and 65 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rectified by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

‡ As extended 1st October, 1929.

The results apply to the Civil Day or from midnight to midnight.

The height of the stem of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into inches; daily values by the application of corrections deduced from a discussion of the barographic records made during the 50 years ending 1905. With the corrected mean readings of the dry bulb thermometer, forming the corrected mean of the readings of the air, and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the A.R. Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1896. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.59 ins. at the beginning of the week to 29.02 ins. by 20h. on 20th; increased to 29.70 ins. by 23h. on 21st; decreased generally to 28.92 ins. by 16h. on 24th; increased generally and was 29.59 ins. by midnight on the 26th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 2ND NOVEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-fourth week of the year numbered 6,186 corresponding to an annual rate of 16·4 per 1,000 living: stillbirths numbered 252 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,191 (196 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Oct. 12.	Oct. 19.	Oct. 26.	Nov. 2.
107 Great Towns	10·3	10·5	10·6	11·1
London	9·7	9·8	10·7	11·3
Birmingham	9·7	9·7	10·1	9·9
Liverpool	13·0	13·3	13·6	12·5
Manchester	11·9	11·8	12·1	14·0
Sheffield	11·0	9·5	8·1	9·4
Leeds	12·9	11·2	12·3	10·5
Bristol	10·3	8·9	8·9	10·7
West Ham	10·2	11·4	8·8	11·6

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 62 against 75, 67 and 70 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 186, 136 and 102 in the three preceding weeks were 102 and included 30 in London, 11 in Liverpool and 8 in Manchester.

In London (Administrative County including the City of London) there were 1,313 live births corresponding to an annual rate of 15·3 per 1,000 living: stillbirths numbered 38 corresponding to a rate of 28 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 970 (57 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 53, against 63, 65 and 62 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

There was no death from small-pox in the returns received from areas outside Greater London, the County Boroughs and Great Towns for the month of September last.

BELFAST† ..	415,151	141	?	105	22	-	-	1	3	-	3	2

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

§ As extended 1st April, 1929.

‡ As extended 1st October, 1929.

 ‡ 1 millimetre = ·04 inch nearly; 1 inch = 25·4 millimetres.
 § Return not received.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.59 ins. at the beginning of the week to 29.84 ins. by 23h. on October 27th; decreased to 29.14 ins. by 4h. on October 28th; increased to 30.24 ins. by 20h. on October 31st; decreased generally and was 30.01 ins. by midnight on November 2nd.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 9TH NOVEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-fifth week of the year numbered 6,532 corresponding to an annual rate of 17·3 per 1,000 living: stillbirths numbered 260 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,506 (315 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	Oct. 19.	Oct. 28.	Nov. 2.	Nov. 9.
107 Great Towns	10·5	10·6	11·1	11·9
London	9·8	10·7	11·3	12·3
Birmingham	9·7	10·1	9·9	11·8
Liverpool	13·3	13·6	12·5	13·3
Manchester	11·8	12·1	14·0	13·7
Sheffield	9·5	8·1	9·4	11·5
Leeds	11·2	12·3	10·5	12·8
Bristol	8·9	8·9	10·7	11·1
West Ham	11·4	8·8	11·6	11·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 68 against 67, 70 and 62 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 136, 102 and 102 in the three preceding weeks were 78 and included 20 in London, 9 in Birmingham and 8 in Manchester.

In London (Administrative County including the City of London) there were 1,422 live births corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 47 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,048 (78 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 61, against 65, 62 and 53 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census rate, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and East are corrected by the exclusion of deaths of persons admitted into public institutions from without respective areas.

§ As extended 1st April, 1929.

‡ As extended 1st October, 1929.

Table 2.—LONDON and certain CITIES in the } BIRTHS and DEATHS for last available

No. of Column ..	26	Sum 13.7	Sum 65.4	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observa-
tions made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermo-
meter, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.
The symbols employed are: -P. positive; N. negative; w. weak; m. moderate;
s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument,
show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 30.01 ins. at the beginning of the week to 29.9 ins. by 2h. on 3rd; increased generally to 30.3 ins. by 9h. on 4th; decreased to 29.4 ins. by 12h. on 5th; increased to 29.75 ins. by 11h. on 7th; decreased to 29.41 ins. by 6h. on 8th; increased to 29.36 ins. by 10h. on 9th; decreased and was 29.72 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 16TH NOVEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-sixth week of the year numbered 5,528 corresponding to an annual rate of 14·6 per 1,000 living: stillbirths numbered 274 corresponding to a rate of 47 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,306 (200 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	Oct. 26.	Nov. 2.	Nov. 9.	Nov. 16.
107 Great Towns	10·6	11·1	11·9	11·4
London	10·7	11·3	12·3	11·1
Birmingham	10·1	9·9	11·8	10·3
Liverpool	13·6	12·5	13·3	12·5
Manchester	12·1	14·0	13·7	12·7
Sheffield	8·1	9·4	11·5	10·7
Leeds	12·3	10·5	12·8	10·4
Bristol	8·9	10·7	11·1	12·8
West Ham	8·8	11·6	11·4	12·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 59 against 70, 62 and 68 in the preceding three weeks. The deaths of children under two years of age from diarrhoea and enteritis which had been 102, 102 and 79 in the three preceding weeks were 82 and included 16 in London, 6 in Birmingham and 7 in Manchester.

In London (Administrative County including the City of London) there were 1,191 live births corresponding to an annual rate of 13·9 per 1,000 living: stillbirths numbered 38 corresponding to a rate of 31 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 949 (99 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 36, against 62, 53 and 61 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figures, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and elsewhere are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

As extended 1st April, 1929.

† As extended 1st October, 1929.

No. of Column ..	26	Sum 7·7	Sum 62·7	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29·73 ins. at the beginning of the week to 29·50 ins. by 9h. on 10th; increased to 29·83 ins. by 2h. on 11th; decreased to 28·85 ins. by 2h. on 12th; increased generally to 29·63 ins. by 8h. on 15th; decreased to 28·80 ins. by 9h. on 16th; increased and was 29·37 ins. by midnight on the same day.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1928.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains
classified in 31 separate 'Tables,' a wealth of Statistical
data relating to public mortality. The figures given for
the year 1928 give exhaustive information relating to the
mortality of the population for more than 200 diseases, &c.
analysed by sex into age groups, together with a mass of
other figures on other aspects of public health, e.g., infec-
tious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations
of United Kingdom and Ireland, British Dominions, Colonies
and Possessions, and Foreign Countries; and for England
and Wales, Births by sex and legitimacy, Marriages by age
and civil condition, Divorces, Parliamentary and Local
Government Electors by sex, and particulars of changes
in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 23RD NOVEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-seventh week of the year numbered 6,109 corresponding to an annual rate of 16·1 per 1,000 living: stillbirths numbered 265 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,791 (485 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Nov. 2.	Nov. 9.	Nov. 16.	Nov. 23.
107 Great Towns	11·1	11·9	11·4	12·7
London	11·3	12·3	11·1	12·9
Birmingham	9·9	11·8	10·3	11·3
Liverpool	12·5	13·3	12·5	14·3
Manchester	14·0	13·7	12·7	14·9
Sheffield	9·4	11·5	10·7	12·5
Leeds	10·5	12·8	10·4	12·0
Bristol	10·7	11·1	12·8	10·3
West Ham	11·6	11·4	12·9	15·1

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 68 against 62, 68 and 59 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,371 live births corresponding to an annual rate of 16·0 per 1,000 living: stillbirths numbered 63 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,106 (157 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 56, against 53, 61 and 36 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES:

There was no death from small-pox in the returns received from areas outside Greater London, the County Boroughs and Great Towns for the month of October last.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929 except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

§ As extended 1st October, 1929.

DATE NOVEMBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY .. 17	mP till 7h.; then sP.	0·2	8·7	Very cloudy till 9h.; then nearly over- cast generally fog 7h. till 15h.; then mist till 21h. Hoar frost at night.
MONDAY .. 18	mP till 3½h.; sP till 2h.; mP till 22h.; then sN.	0·0	8·7	Nearly overcast till 6h.; then overcast. Thick fog 3h. till 17½h. Rain from 22h.
TUESDAY .. 19	mN till 0½h.; wP till 3½h.; wN till 6h.; wP till 18h.; then mP.	0·0	8·6	Overcast till 21½h.; then very cloudy. Rain 3½h.; and 4½h. till 6h.; then damping generally till 14h. Brisk wind 2h. till 22h. Lunar halo generally from 21½h.
WEDNESDAY 20	wP till 3½h.; then mP.	4·8	8·6	Very cloudy till 9h.; nearly overcast till 14h.; cloudy till 19½h.; nearly overcast till 21h.; then clearing slowly to partially cloudy by 24h. Lunar halo 6h. Dew at night.
THURSDAY 21	mP till 2h.; wP till 6h.; then mP.	6·6	8·5	Cloudy till 4h.; nearly cloudless till 13½h.; nearly overcast till 15h.; then variably cloudy. Lunar halo 2h. Dew in morning and at night.
FRIDAY .. 22	wP till 10h.; mP till 17h.; variably sP and sN till 18h.; then wP.	4·4	8·5	Very cloudy till 15h.; nearly overcast till 19½h.; then variably cloudy. Rain 16½h. till 19h.; and at 22½h. Brisk wind 12h. till 15h. Dew in morning.
SATURDAY 23	wP till 0½h.; vari- ably sP and sN till 3h.; wP till 10h.; variably wP and wN till 13h.; variably sN and sP till 17h.; then mP.	0·4	8·5	Variably cloudy till 9h.; overcast till 13½h.; variably cloudy till 20½h.; then partially cloudy. Rain between 1h. and 2½h.; and generally from 9h. till 15h.; and between 16½h. and 17h. Brisk wind 8h. till 17h.; with high wind 12h. till 14h.
No. of Column ..		Sum 16·4	Sum 60·1	38

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29·37 ins. at the beginning of the week to 29·95 ins. by 10h. on 18th; decreased generally to 29·12 ins. by 14h. on 23rd; increased and was 29·35 ins. by midnight on the same day.

REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 30TH NOVEMBER,
1929**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1929.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 30TH NOVEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-eighth week of the year numbered 5,614 corresponding to an annual rate of 14·8 per 1,000 living : stillbirths numbered 253 corresponding to a rate of 43 per 1,000 total births (including stillborn) : the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,500 (291 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Nov. 9.	Nov. 16.	Nov. 23.	Nov. 30.
107 Great Towns	11·9	11·4	12·7	11·9
London	12·3	11·1	12·9	12·1
Birmingham	11·8	10·3	11·3	12·0
Liverpool	13·3	12·5	14·3	13·1
Manchester	13·7	12·7	14·9	12·7
Sheffield	11·5	10·7	12·5	11·8
Leeds	12·8	10·4	12·0	13·8
Bristol	11·1	12·8	10·3	12·4
West Ham	11·4	12·9	15·1	10·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 68 against 68, 59 and 68 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,292 live births corresponding to an annual rate of 15·1 per 1,000 living : stillbirths numbered 39 corresponding to a rate of 29 per 1,000 total births (including stillborn) : the civilian deaths (excluding stillbirths) numbered 1,032 (74 less than the number in the preceding week) : infant mortality based on the average weekly number of live births during the last 52 weeks was 59, against 61, 36 and 56 in the three weeks preceding.

During the week small-pox was mentioned as a cause of death in one case which has been provisionally classified to small-pox and assigned to Poplar (Met. Borough).

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st October, 1929.

|| Includes one death from small-pox

SUNDAY .. 24	wP till 5h.; variably mP and sN till 10h.; sP till 19h.; wP till 21h.; then variably wP and sN till 22h.; then variably wP and sN till 7h.; wN till 10h.; wP till 16h.; mP till 22½h.; then wP.	3.3	8.4	Partially cloudy till 2h.; nearly overcast till 11h.; partially cloudy till 17h.; then becoming overcast by 19h. Rain at 5½h. from 6½h. till 8½h.; and from 2½h. Shower at 9½h. Damping 22h. till 22½h. Shower at 9½h. Damping 22h. till 22½h.
MONDAY .. 25	sN till 1½h.; wP till 7h.; wN till 10h.; wP till 16h.; mP till 22½h.; then wP.	0.0	8.4	Overcast till 18½h.; nearly cloudless till 21½h.; then becoming overcast by 2½h. Rain till 3h. Damping from 5½h. till 11h.; and occasionally between 12h. and 15h.; Showers at 15h., 17½h. and 21½h. Brisk wind till 12h.; high wind till 17h.; then brisk wind.
TUESDAY .. 26	wP till 2h.; variably sP and sN till 3½h.; mP till 9h.; variably sP and sN till 13h.; sP till 18h.; then mP.	0.8	8.3	Variably cloudy till 19½h.; then becoming cloudless by 20½h. Brisk wind till 3h. Rain 9½h. till 10½h.; and 12½h. till 13h. Faint parcelon 15½h.
WEDNESDAY 27	wP till 5h.; mP till 19h.; then variably wP and wN.	4.6	8.3	Nearly cloudless till 12h.; then becoming overcast by 1½h. Mist and hoar frost in morning. Frequent solar halo 14h. till 13½h. Parcelon at 13½h. and 15½h. Damping from 19h.
THURSDAY 28	Variably wP and mN till 13h.; wP till 18h.; mP till 23h.; then wP.	0.0	8.3	Overcast till 18h.; then nearly overcast. Damping till 9½h.; and generally from 12½h. till 21h. Rain 9½h. till 12½h., and at 22½h. Brisk wind from 12h.
FRIDAY .. 29	wP till 4h.; mP till 8h.; variably wP and wN till 9h.; mP till 20h.; variably sP and sN till 23h.; then wP.	1.2	8.2	Overcast generally till 13½h.; variably cloudy till 20h.; then nearly overcast. Brisk wind till 2h. Rain 8½h. till 9½h.; 20½h. till 21½h. Showers at 10½h. and 10¾h.
SATURDAY 30	wP till 3½h.; sN till 6h.; wP till 9h.; variably mP and sN till 19h.; variably sN and sP till 22h.; then mP.	1.6	8.2	Nearly overcast till 9h.; very cloudy till 1¾h.; nearly overcast till 22½h.; then nearly cloudless. Rain 3½h. till 6h.; between 9h. and 12h.; from 15½h. till 20½h.; and 21½h. till 22h.
		Sum 11.5	Sum 58.1	
		27	38	

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 122 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher", and - "lower", than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.
The reading of the barometer increased from 29.35 ins. at the beginning of the week to 29.64 ins. by 18h. on 24th; decreased to 29.20 ins. by 14h. on 25th; increased to 29.80 in- by 9h. on 27th; decreased to 29.08 ins. by 16h. on 28th; increased to 29.38 ins. by 4h. on 29th; decreased and was 29.06 ins. by midnight on the 30th.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1928.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1928 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 7TH DECEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the forty-ninth week of the year numbered 5,915 corresponding to an annual rate of 15·6 per 1,000 living: stillbirths numbered 244 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,074 (426 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Nov. 16.	Nov. 23.	Nov. 30.	Dec. 7.
107 Great Towns	11·4	12·7	11·9	10·8
London	11·1	12·9	12·1	10·3
Birmingham	10·3	11·3	12·0	9·9
Liverpool	12·5	14·3	13·1	13·4
Manchester	12·7	14·9	12·7	11·1
Sheffield	10·7	12·5	11·8	10·1
Leeds	10·4	12·0	13·8	9·0
Bristol	12·8	10·3	12·4	10·6
West Ham	12·9	15·1	10·5	9·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 62 against 59, 68 and 68 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,364 live births corresponding to an annual rate of 15·9 per 1,000 living: stillbirths numbered 39 corresponding to a rate of 28 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 884 (148 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 47, against 36, 56 and 59 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
DECEMBER.				
SUNDAY ..	1 Variably sP and sN till 9h.; then mP.	0.0	8.1	Partially cloudy till 1h.; overcast generally till 20h.; then becoming cloudless by 20h. Rain 23h. till 6h. Damping 7h. till 8h.; and 10h. till 10h. Mist from 11h. till 21h. Heavy dew at night.
MONDAY ..	2 mP till 5h.; variably wP and mN till 17h.; sP till 23h.; then mP.	0.0	8.1	Nearly cloudless till 6h.; then becoming cloudless by 18h. Brisk wind 7h. till 17h. with high wind 12h. till 14h. Damping generally from 9h. till 17h. Dew in morning.
TU ESDAY ..	3 mP.	0.5	8.1	Variably cloudy till 11h.; then nearly overcast generally. Hoar frost in morn- ing. Dew at night.
WEDNESDAY	4 wP till 2h.; sN till 3h.; wP till 8h.; mP till 23h.; then wP.	1.0	8.0	Overcast till 13h.; then variably cloudy. Rain 2h. till 3h.; and 13h. till 20h. Damping 6h. till 7h. Slight shower 18h. Brisk wind from 21h.
THURSDAY	5 wP till 3h.; variably sN and wN till 14h.; then mP.	0.0	8.0	Variably cloudy till 3h.; overcast till 19h.; variably cloudy till 16h.; then par- tially cloudy. Rain 3h. till 6h.; and 12h. till 14h. Shower at 10h. Brisk wind till 4h.; high wind till 6h.; gale till 10h.; high wind till 13h.; and brisk wind 17h. till 22h.
FRIDAY ..	6 mP till 8h.; then variably sN and sP.	3.9	8.0	Nearly cloudless till 12h.; then overcast generally. Damping at 14h.; and 16h. till 15h. Heavy rain 17h. till 20h.; 21h. till 22h.; and 23h. till 23h. Brisk wind 16h. till 19h.; then high wind. Fre- quent lightning and thunder between 23h. and 23h. Heavy hail 23h.
SATURDAY	7 Variable till 9h.; then mP.	0.3	8.0	Nearly overcast generally till 15h.; then nearly cloudless from 16h. Frequent showers 0h. till 9h.; and between 12h. and 13h. High wind till 1h.; gale till 16h.; high wind till 18h.; then brisk wind till 20h. Lightning about 14h.
Sum 5.7		Sum 5.3	Sum 28	
No. of Column ..	26	27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 55 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.06 ins. at the beginning of the week to 29.05 ins. by 9h. on 1st; increased to 29.46 ins. by 23h. on 1st; decreased to 29.03 ins. by 13h. on 2nd; increased to 29.50 ins. by 21h. on 3rd; decreased to 29.29 ins. by 6h. on 4th; increased to 29.48 ins. by 19h. on 4th; decreased to 28.82 ins. by 1h. on 5th; increased to 29.28 ins. by 11h. on 6th; decreased to 28.94 ins. by 4h. on 7th; increased to 29.45 ins. by 21h. on 7th; decreased and was 29.40 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 14TH DECEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fiftieth week of the year numbered 5,759 corresponding to an annual rate of 15·2 per 1,000 living: stillbirths numbered 227 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,321 (247 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Nov. 23.	Nov. 30.	Dec. 7.	Dec. 14.
107 Great Towns	12·7	11·9	10·8	11·5
London	12·9	12·1	10·3	10·8
Birmingham	11·3	12·0	9·9	11·5
Liverpool	14·3	13·1	13·4	13·3
Manchester	14·9	12·7	11·1	12·3
Sheffield	12·5	11·8	10·1	11·1
Leeds	12·0	13·8	9·0	13·4
Bristol	10·3	12·4	10·6	8·7
West Ham	15·1	10·5	9·7	12·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 72 against 68, 68 and 62 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,277 live births corresponding to an annual rate of 14·9 per 1,000 living: stillbirths numbered 32 corresponding to a rate of 24 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 921 (37 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 64, against 56, 59 and 47 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1928 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st October, 1929.

§ As extended 1st April, 1929.

The results apply to the Civil Day or from midnight to midnight.

The height of the stem of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1803. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1803, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.40 ins. at the beginning of the week to 29.0 ins. by 13h. on 8th; increased to 29.53 ins. by 3h. on 9th; decreased to 28.7 in. by 13h. on 9th; increased to 29.60 ins. by 16h. on 10th; decreased to 29.16 ins. by 5h. on 11th; increased to 30.15 ins. by 9h. on 13th; decreased to 29.77 ins. by 6h. on 14th; increased and was 30.07 ins. by midnight on the same day.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1928.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1928 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poliomyelitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 21ST DECEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fifty-first week of the year numbered 5,718 corresponding to an annual rate of 15·1 per 1,000 living: stillbirths numbered 251 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,423 (102 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Nov. 30.	Dec. 7.	Dec. 14.	Dec. 21.
107 Great Towns	11·9	10·8	11·5	11·7
London	12·1	10·3	10·8	11·5
Birmingham	12·0	9·9	11·5	10·1
Liverpool	13·1	13·4	13·3	10·8
Manchester	12·7	11·1	12·3	11·3
Sheffield	11·8	10·1	11·1	13·5
Leeds	13·8	9·0	13·4	11·9
Bristol	12·4	10·6	8·7	10·8
West Ham	10·5	9·7	12·7	11·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 63 against 68, 62 and 72 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,204 live births corresponding to an annual rate of 14·0 per 1,000 living: stillbirths numbered 32 corresponding to a rate of 26 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 983 (62 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 43, against 59, 47 and 64 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st October, 1929.

§ As extended 1st April, 1929.

The results apply to the Civil Day or from midnight to midnight.

The height of the eastern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -F. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.07 ins. at the beginning of the week to 30.56 ins. by 10h. on 17th; decreased and was 30.07 ins. by midnight on the 21st.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
DECEMBER.				
SUNDAY ..	15 mP till 12h.; then sP.	0.0	7.8	Overcast generally. Slight rain 0h. till 12h. Lunar halo 13h. to 20h.; and at 21h.
MONDAY ..	16 sP.	2.7	7.8	Overcast till 4h.; clearing to cloudless by 6h. Slight fog 7h. till 9h.; and from 17h. Hoar frost in morning and at night.
TUESDAY ..	17 sP.	0.5	7.8	Cloudless generally till 18h.; very cloudy till 21h.; then overcast. fog throughout. Hoar frost in morning and at night.
WEDNESDAY	18 sP till 22h.; then mP.	2.9	7.8	Overcast till 2h.; very cloudy till 6h.; then cloudless. Fog till 21h. Hoar frost throughout.
THURSDAY	19 mP till 8h.; then sP.	6.5	7.8	Overcast till 3h.; then becoming cloud- less by 4h. Hoar frost in morning and at night.

1929. No. 52.

THE

REGISTRAR-GENERAL'S

WEEKLY RETURN OF BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGH
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

SATURDAY, 28TH DECEMBER,
1929

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1930.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 28TH DECEMBER, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fifty-second week of the year numbered 4,140 (see note below) corresponding to an annual rate of 10·9 per 1,000 living: stillbirths numbered 267 corresponding to a rate of 61 per 1,000 total births registered (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,650 (227 more than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Dec. 7.	Dec. 14.	Dec. 21.	Dec. 28.
107 Great Towns	10·8	11·5	11·7	12·3
London	10·3	10·8	11·5	11·9
Birmingham	9·9	11·5	10·1	11·6
Liverpool	13·4	13·3	10·8	14·1
Manchester	11·1	12·3	11·3	13·8
Sheffield	10·1	11·1	13·5	13·1
Leeds	9·0	13·4	11·9	10·3
Bristol	10·6	8·7	10·8	10·6
West Ham	9·7	12·7	11·7	13·6

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 64 against 62, 72 and 63 in the preceding three weeks.

In London (Administrative County including the City of London) there were 909 live births registered (see note below) corresponding to an annual rate of 10·6 per 1,000 living: stillbirths numbered 52 corresponding to a rate of 54 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1015 (32 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 64, against 47, 64 and 43 in the three weeks preceding.

Note.—The abnormally low number of live births registered during the week is mainly due to delay in registration owing to the Christmas holiday.

YEAR 1929.

The provisional yearly totals published in Tables 3 and 5 for the aggregate of the Great Towns and for London indicate that the birth-rate for 1929 will be lower than that for 1928, while the general death-rate and infantile mortality will be appreciably higher, owing to the high rates experienced during the first quarter of the year.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

MONDAY ..	23 sP till 11 1/2h.; then variably mP and mN.	0.2	7.8	Overcast generally. Fog 2h. till 4h. Damping 1 1/2h. till 10 1/2h.; and from 20h. Hoar frost in morning.	
TUESDAY ..	24 Variably sN and sP till 4 1/2h.; sP till 20h.; then variably mP and mN.	5.0	7.8	Overcast till 6 1/2h.; partially cloudy till 9h.; nearly cloudless generally till 5h.; then becoming overcast by 1 1/2h. Slight rain till 4 1/2h.; and from 21 1/2h. Brisk wind 3h. till 10h.; and from 23h.	
WEDNESDAY	25 Variably wP and sN till 7h.; mP till 10h.; sP till 11h.; then mP.	2.5	7.8	Overcast till 7 1/2h.; then variably cloudy. Rain till 7 1/2h.; with heavy rain at 3 1/2h. and 5 1/2h. Brisk wind till 12h.; high wind till 13h.; gale till 14h.; high wind till 17h.; then brisk wind till 21h.	
THURSDAY	26 mP till 8h.; then sP.	4.1	7.8	Partially cloudy till 9h.; then nearly cloudless generally. Dew in morning. Hoar frost at night.	
FRIDAY ..	27 Variably mP and wP till 7h.; then sP.	2.1	7.8	Variably cloudy. Rain 1 1/2h. till 3h.; and 6h. till 5 1/2h.	
SATURDAY	28 sP till 12 1/2h.; variably wN and wP till 17h.; mP till 22h.; then wP.	0.0	7.8	Partially cloudy till 7 1/2h.; then overcast. Solar halo 9 1/2h. till 10 1/2h. Rain 12 1/2h. till 13 1/2h.; from 13h. till 17 1/2h.; and occasionally till 19h. Brisk wind 16h. to 18h.; and from 20h. Hoar frost in morning.	
No. of Column ..		Sum 13.9	Sum 54.6		
		27	28		

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1908. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are: -P. positive; N. negative; W. weak; M. moderate; S. strong; and V. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.07 ins. at the beginning of the week to 29.04 ins. by 5h. on 22nd; increased to 29.18 ins. by 7h. on 23rd; decreased to 28.62 ins. by 1h. on 24th; increased to 29.37 ins. by 17h. on 24th; decreased to 28.89 ins. by 6h. on 25th; increased to 29.73 ins. by 21h. on 26th; decreased to 29.48 ins. by 7h. on 27th; increased to 29.62 ins. by 9h. on 28th; decreased and was 29.19 ins. by midnight on the same day.
